BHS student completes NASA High School Aerospace Scholars program

Bandera High School Student Patrick Lasiter completed the National Aeronautics and Space Administration (NASA) Texas High School Aerospace Scholars (HAS) summer experience with NASA's Johnson Space Center.

During his experience, he worked with teams of students to utilize a systems engineering model to plan a mission to the Moon and create a preliminary design review proposing their approach through the NASA Artemis-themed course. Lasiter received guidance from NASA scientists, engineers, interns and certified Texas teachers.

Students are nominated to participate in HAS by their state legislators. Patrick was selected as one of over 800 high school juniors to be a part of this program.
